

Dem-Con Recovery and Recycling

September LEED Report

Dem- Con Recovery and Recycling is dedicated to the recovery of construction and demolition debris. Our facility utilizes a mechanized sorting system to recover six different materials: ferrous and non-ferrous metals, cardboard, wood, aggregate, and alternative daily cover (ADC). A combination of equipment and manual sorting results in high quality materials being sent to end markets throughout the Twin Cities and greater Minnesota.

Certified Recycling Facility

Dem-Con is proud to be certified by the Recycling Certification Institute. This third-party certification ensures our customers that Dem-Con’s recycling numbers are real, accurate, and reliable. An additional LEED credit is available to haulers that utilize our facility.

Ask how you can receive 1 extra LEED point when using our facility.
