

Can it be COMPOSTED?

ACCEPTABLE ITEMS FOR ORGANICS RECYCLING

- Any and all food waste
- Uncoated paper products like napkins or paper towels
- Coffee grounds and filters
- House plants and flowers
- Certified compostable products (plates, silverware or plastic bags)

CERTIFIED COMPOSTABLE LABEL

Look for the BPI labels on your compostable products such as plates, silverware or cups. These labels certify the product as compostable and able to break down in commercial composting.

Labeling that says made from plants, sustainable, biodegradable or eco-friendly does not mean the product is necessarily compostable.
